

Parallel Universes, Parallel Earths and Twin Selves

With every new decision we make, a new universe breaks off to follow this decision and our life to its ultimate end.

Imagine that out there in the great beyond there is a universe where every decision you made was the right one - from the very beginning of your existence. Think of the amazing life you would be living in this parallel dimension!

Now imagine that out there exists a universe where every decision by every person who has ever lived was the right one! This does exist! It is the original Garden of Eden, where Adam chose not to eat the fruit. Imagine how society would have developed in these 6000-odd years without ever having to worry about or deal with any negatives of any kind. We would be far advanced over where we are today - in every segment of society!

This is the parallel universe we will all transcend to in the very near future. I call it Eden ReCreated! In this universe everyone is Glorified and Eternal! Everyone who has ever been conceived will have their place in this universe - meaning that we will see and once again be with all those we have loved and lost (humans and animals). Everyone will be whole and healthy and forever youthful. There will be no disease or death. There will be no sin or evil.

There will be three parts to mankind's journey exploring everything God has created for us:

1. **Exploring this earth** - our first mission will involve setting out to see every square mile of our planet.
2. **Exploring New Jerusalem** - New Jerusalem is 1500 levels, each 1500 square miles. On each level is a completely different and distinct 'world.' One of these worlds is Atlantis.
3. **Exploring our Universe and Parallel Universes** - On each parallel universe is a version of ourself - a 'twinsel' which has made different decisions and as a result our life in this universe has followed a different course. By travelling to these different universes and inhabiting the bodies of our twinselves, we will be able to experience and affect each and every one of our other lives. Imagine, we may get to experience first hand what it feels like to be a rock star playing to 70,000 concert goers, to be a great scientist who has made a novel and important discovery, to be an astronaut on the first mission to Mars, or to be homeless and destitute.

This represents the bulk of what I want to tell you. Two of the most intelligent men in our history, Albert Einstein and Stephen Hawking, both believed very fervently in the existence of parallel universes. I have simply followed my heart (through which we hear the still, small voice of God) and taken their works to the nth degree!
